EMKA worldwide

The EMKA group is one of the worldwide leading manufacturers of lockings, hinges and seals for enclosures in the areas of industry, electronics and transport.

Currently, the overall range comprises more than 15,000 articles, which are developed, manufactured, refined and assembled at nine production sites in Germany, France, Great Britain, Spain, Bosnia and Herzegovina, USA and China.

With 1,400 employees, the company is represented in 46 countries worldwide.

Locks/Latches

Hinges

Accessories

Product areas

EMKA offers a comprehensive product range of ingenious locking technology from a single source. The modular program structure allows a unique variety of components.

The high quality and product standards are guaranteed by an excellent manufacturing know-how and by the certified process control according to ISO 9001.

Industry

Transport

Electronics

Production

Business units

The EMKA group is divided into four business units which allow a clear focus on individual sectors and taylormade solutions for customers.

With its high level of in-house production, EMKA is in control of the entire production flow in every unit – from the concept to the finished product.

Extrusion of Profiles

Injection Moulding

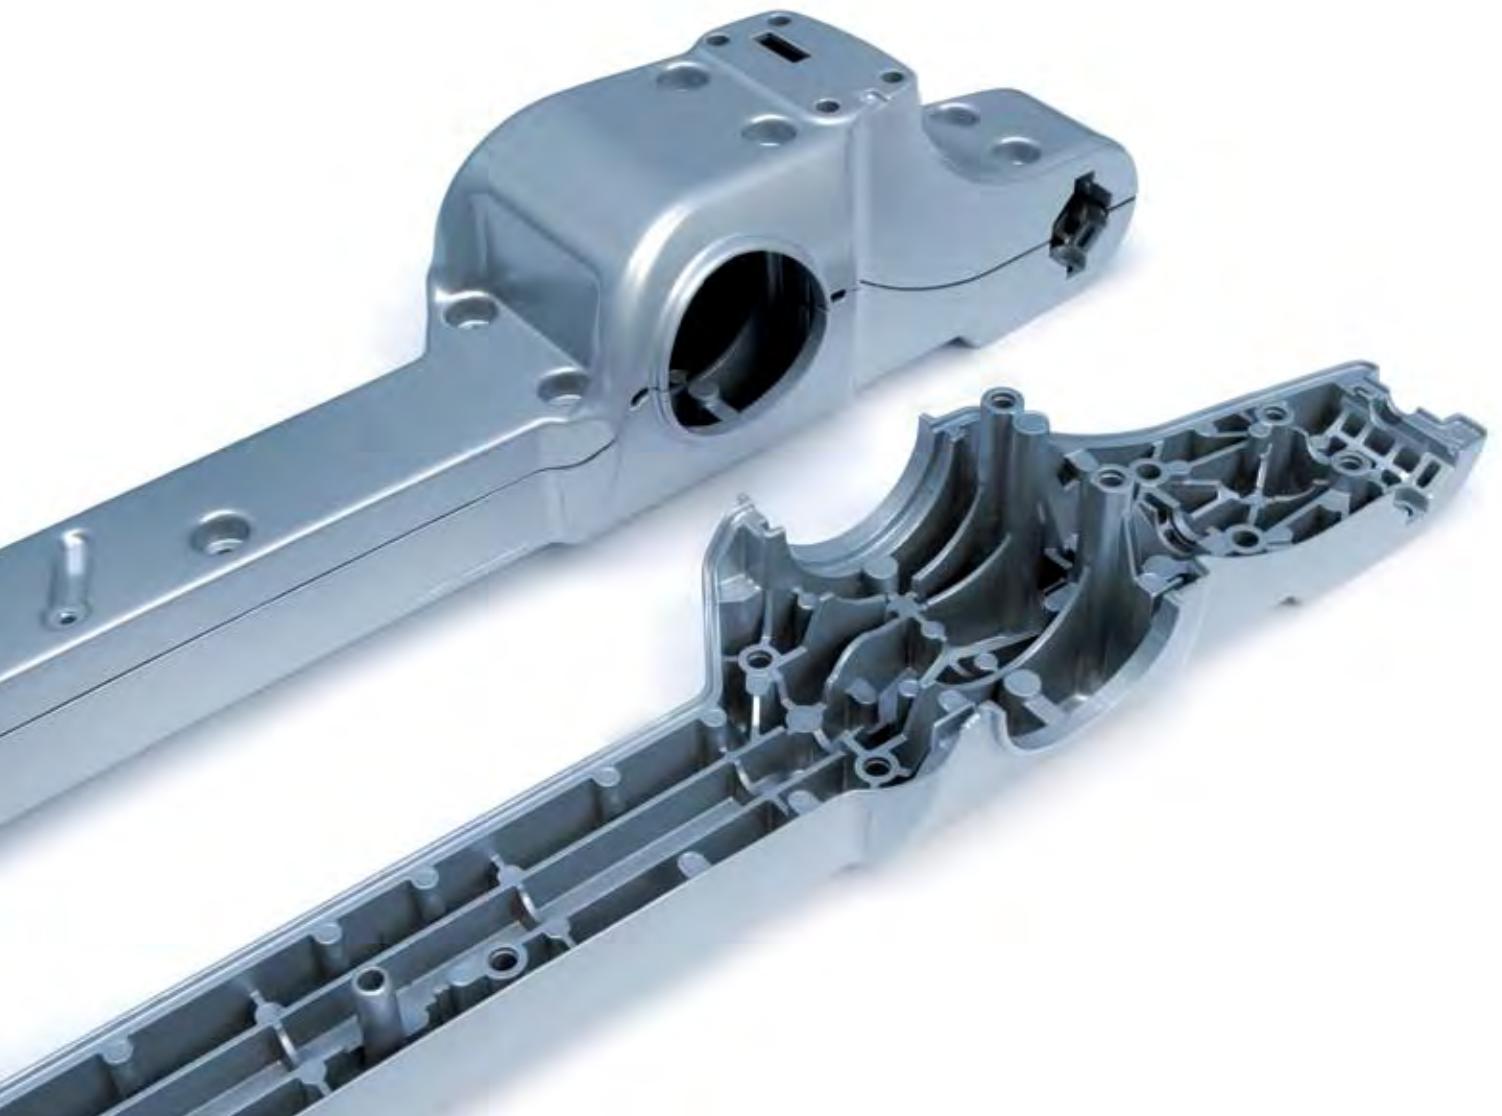

Stamping, Bending
and Forming Technologies

Zinc Die Casting

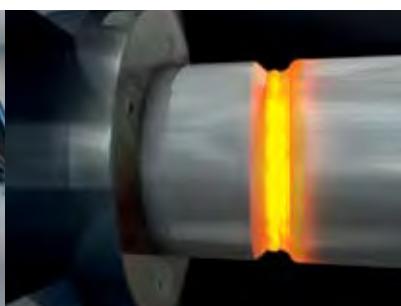

Production from A to Z

Die Cast Aluminium

Aluminium Forging

Friction welding

SST Precision Casting

EMKA is an expert not only in stainless steel casting, and in injecting aluminium, zinc and high performance plastics, but also in the extruding of rubber and plastic profiles.

Other production technologies are stamping, bending, turning, milling, coating, and the final assembly of modular structured product solutions.

Thus, EMKA sets quality standards in locking technology.

Solutions for the road

For many years, EMKA has been a major partner of the automotive industry. In its in-house technology centre, EMKA develops standardised product solutions, as well as customised components and systems for furnishing commercial and special vehicles.

The EMKA product range is also used in vehicle bodies as well as in motor homes and caravans.

Whether locks, handles, hinges or gaskets for diverse mobile applications: EMKA products always stand for maximum safety and reliability.

Solutions for special
vehicle construction

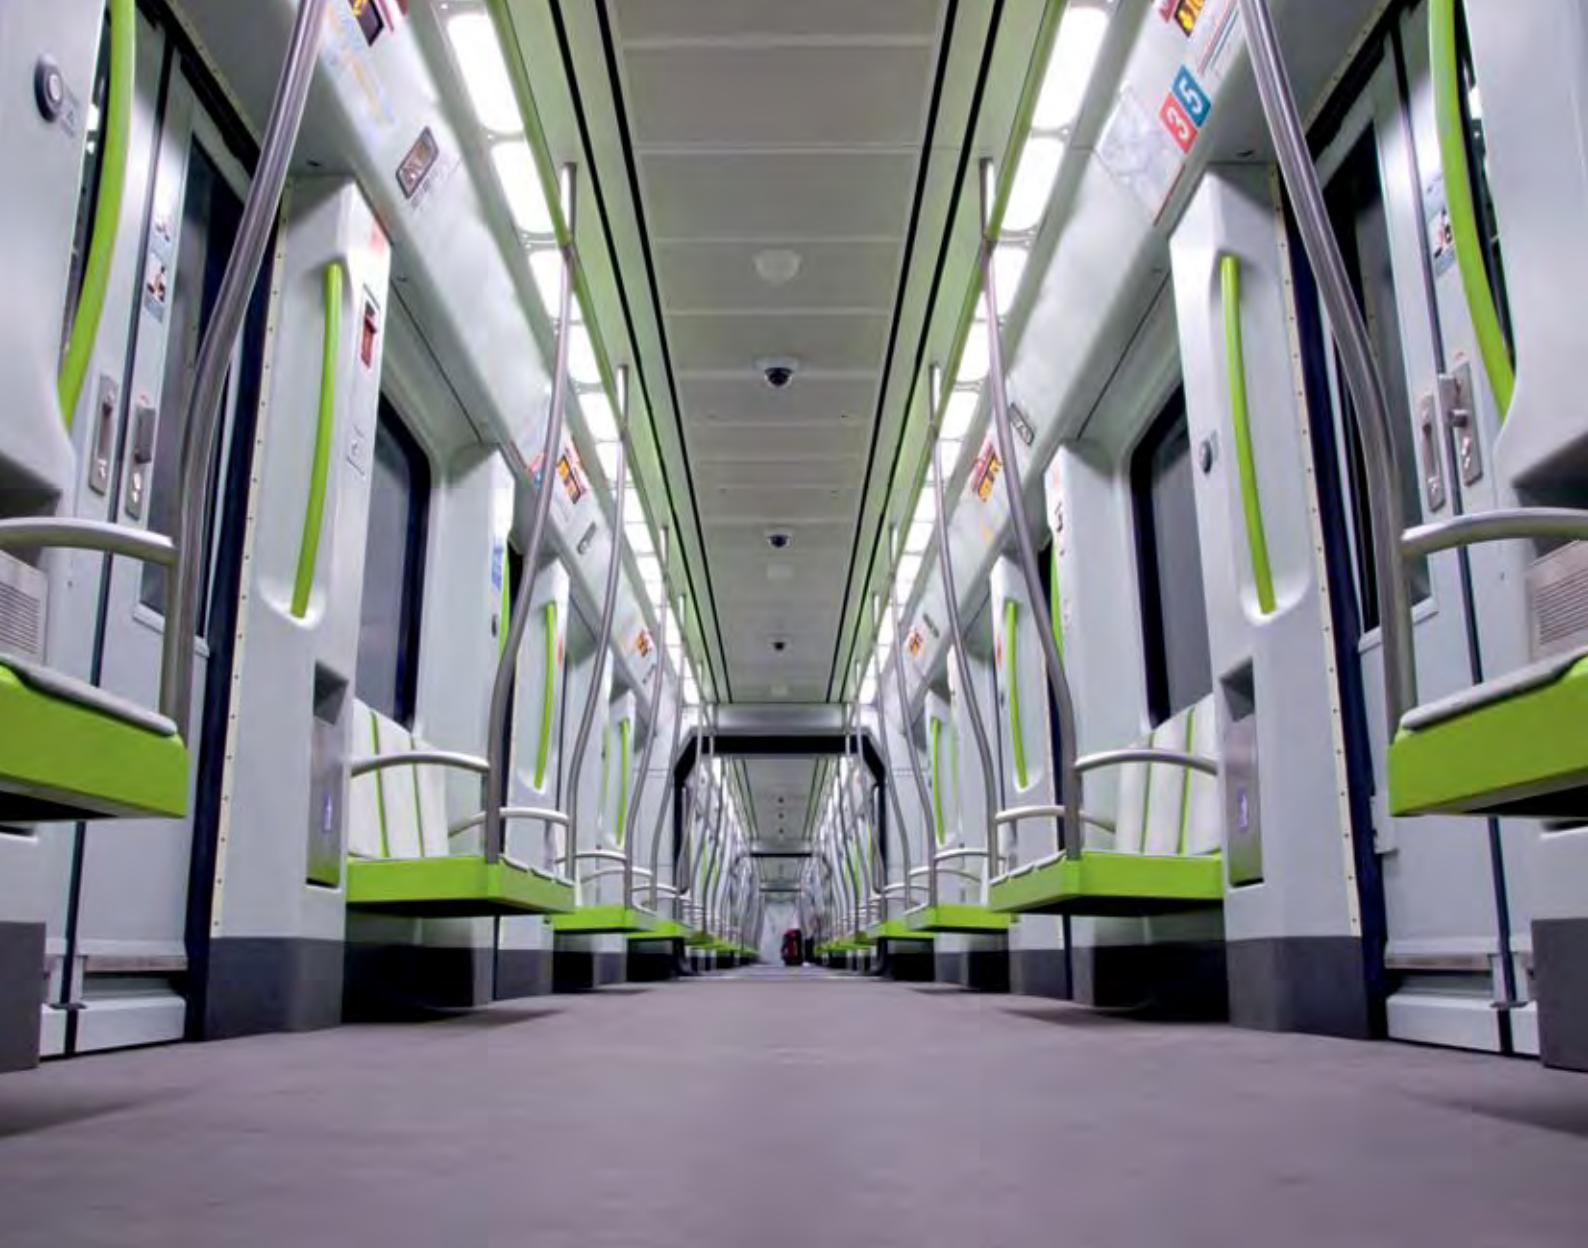

Special vehicles for road construction, agriculture and forestry, emergency services and disaster control, are exposed to particularly harsh conditions. Wetness, dirt, temperature fluctuations, vibrations and permanent load make extraordinary quality demands for the installed components. The locking systems of EMKA are designed for these special demands.

According to DIN EN 61373 vibrationproof designed locks, undetachable foamed seals, as well as various materials and surfaces, are available with many standard solutions.

The large production depth of EMKA makes the delivery of the complete locking system, consisting of lock, hinge and gasket as well as useful accessories, possible.

Solutions for the rail

The product ranges specifically for the rail industry is characterized by its modular design, versatility and high quality.

It meets the specific requirements of the industry and corresponds to the relevant standards of the branch such as EN 45545 „Railway applications – Fire protection of railway vehicles“.

The wide product range of EMKA comprises outdoor as well as indoor applications for railway vehicle construction.

Solutions according to
customer drawings

- 1 Engine compartment seal
- 2 Front shield frame
- 3 Roof gap seal
- 4 Sunroof seal
- 5 Back window frame
- 6 Glass run seal
- 7 B-pillar seal
- 8 Encapsulated quarter window
- 9 Trunk seal
- 10 Waist belt seal (interior/exterior)
- 11 Door seal
- 12 Sillboard seal

Besides 15,000 own catalogue articles, EMKA offers individual production according to customer drawing. An ultra-modern machinery and an extensive know-how in different manufacturing technologies allow maximum material and variant diversity.

EMKA offers a wide range of customized rubber profiles, support profiles, hollow section sealing and lip seals in a wide variety of hardnesses. Loops and roll editing tape, stamped steel and reinforcements of textile fibres can be additionally incorporated.

In further processing, it is possible to manufacture fixed lengths, rings and corner frames. Applying adhesive, bonded coating or flocking, complete the offer.

Door locking system

Technology

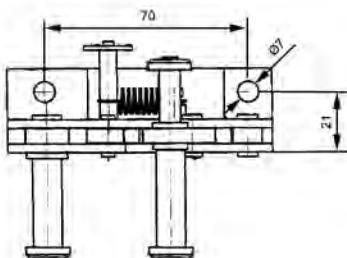

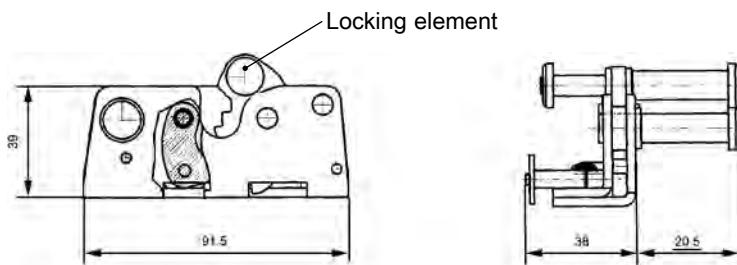

- M1 tested locking system, according to EU specification 70/387
- two rotary latch locks to be positioned freely, hence double security
- Automotive interior door release, zinc die chrome plated, can be positioned freely
- Burglar-proof by exterior handle with freewheel clutch
- Exterior handle designed for clip-in cylinder
- Emergency opening from the interior

Handling

- ergonomically designed actuators
- specially smooth-running operation
- small closing force, hence very quiet
- with central locking, convenient and secure

Versions

- colours as per request
- also available as M1 tested locking system with rotary latch lock
- Interior door release with galvanized surface in alu-look
- designed for clip-in cylinder, compatible with clip-in cylinder system 3
- optionally without central locking

On request:
– Round rod Ø4 available

Further parts see page
– Exterior handle 1.1-125
– Inside handle 1.1-125

Compression lock "Double Red" with double optical opening indicator for stow box PROGRAM 1000

Product description:

The compression latch has two optical opening indicators. These consist of the indicator of the clip-in cylinder and the second indicator for the position of the handle. In case the opening indicator on the sleeve and the clip-in cylinder is visible, the compression latch is unlocked. The same is true for the opening indicator between handle and housing. In case the opening indicator is visible, the compression latch is compressed.

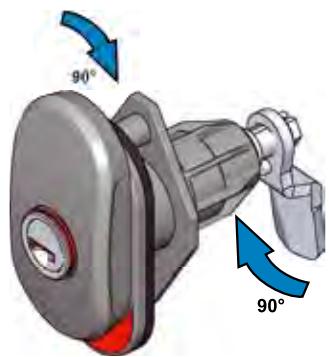

Bush and clip-in cylinder with optical opening indicator.
Indicator visible = clip-in cylinder unlocked

* Attention:
When the fixing plate is turned over, the cut out holes are decreased from Ø10 auf Ø4.1. The Maximum value of the Ts dimension is decreased by -10 mm.

Vibration proof

The compression latch is vibration-proof according to DIN EN 61373. Depending on the installation location and operational conditions, specific checks are necessary and/or supplementary measures of fastening required.

Open condition
By turning the handle by 90°, the cam rotates.

**Compression lock polyamide GF black for clip-in cylinder;
bush for clip-in cylinder zinc-die zinc-coated;
adapter, cog and locking shaft zinc-die;
fixing plate POM black;
Signal ring polyamide GF red;
screw, circlip and pin m.s. zinc coated, with spring and seal,
key can be removed in both positions**

PROGRAM 1000

Vibration proof

These latches are designed to be vibration proof with a distinct "over-center" action. There may be some cases of extreme vibration where this detent is overcome. Therefore we recommend rigorous testing.

Open position
The first 90° of rotation of the insert also turns the cam 90°.

Closed position
The second 90° of rotation of the insert draws the cam 4.5 mm toward the door axially.

Compressed condition

Unlock:
Reversed rotation

Railway version is
compliant with RIC.

These latches are designed to be vibration proof with a distinct "over-center" action. There may be some cases of extreme vibration where this detent is overcome. Therefore we recommend rigorous testing.

When using the compression latch in conjunction with the illustrated dust cap (Art.No. 1000-97-02 / see right), there is another safety aspect:

In addition to the visibility of the red ring when the latch is open, the dust cap cannot be put on and remains open.

turn quarter turn!

Safety quarter turn:

This lock is vibration proof as such. Depending on the installation location and operational conditions, specific checks are necessary and/or supplementary measures of fastening required.

In case of version double bit:
key only removable in locked Position.

Keyhole for double bit according to key DIN 43668.

Note:

Only cams without a catch can be used.
In case of using the opening handle, the H-Dimension is decreased by 2 mm

Stainless steel quarter turn for hygienic areas

PROGRAM 1000

The quarter turn for hygienic areas
meets hygiene standard acc. to DIN EN 1672- and DIN EN 14159

Quarter turn AISI 316L, with seal

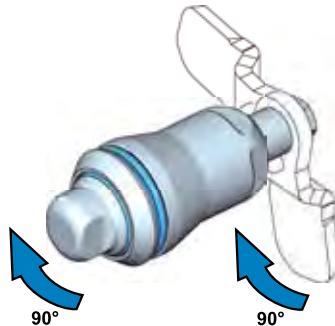

1000-U838

Key zinc die raw

1004-53

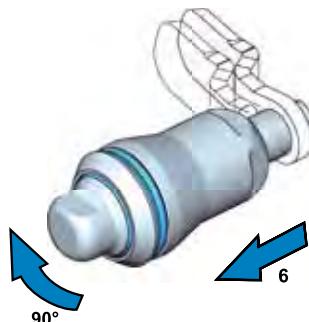

Further parts see page
– cam with catch

1.5-820

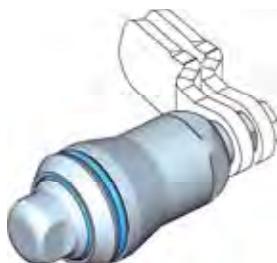

Open condition

The first 90° of rotation of the insert also turns the cam 90°.

Closed position

The second 90° of rotation of the insert draws the cam 6 mm toward the door axially.

Compressed condition

Unlock:
Reversed rotation

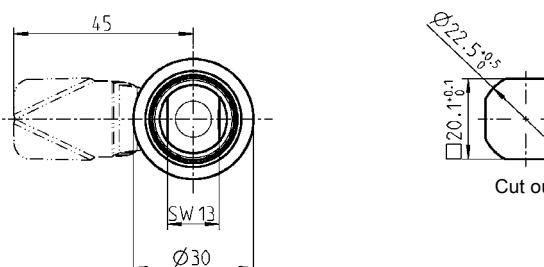

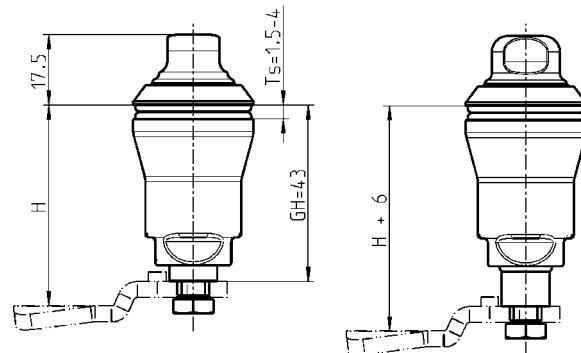

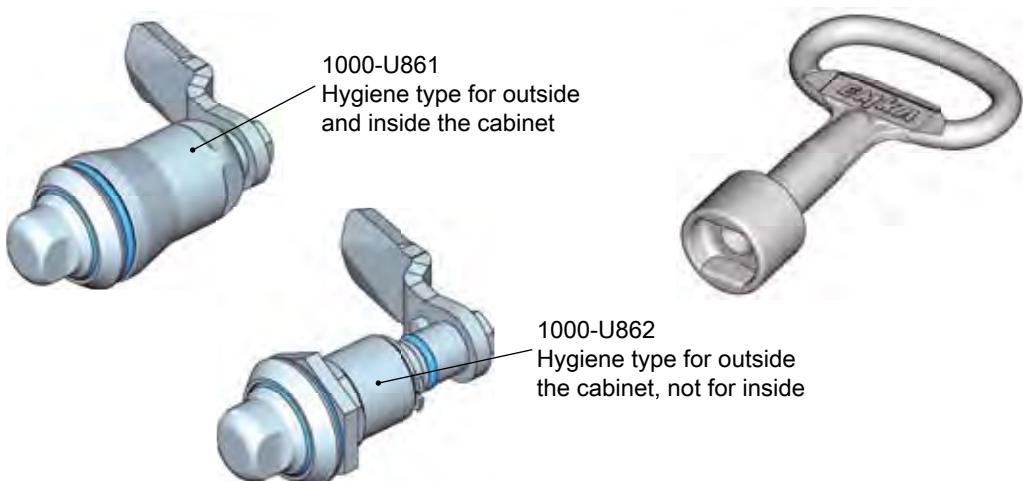

The quarter turn for hygienic areas
meets hygiene standard acc. to DIN EN 1672- and DIN EN 14159

This item is completely IP 65, not only from outside to inside (common standard), but also within the application.

Vibration proof

The compression latch is vibration-proof as such.

Depending on the installation location and operational conditions specific checks are necessary and/or supplementary measures of fastening required.

Compression latch for hygienic areas AISI 316L; with spring and seal

Hygiene type for outside and inside the cabinet

1000-U861

Hygiene type for outside the cabinet, not for inside

1000-U862

Key zinc die raw

1004-53

Order example for cam without catch:

To order a cam without catch, please add -Z to the part number from the table below.

Example: You need a cam for housing GH = 18 without catch and with the H dimension of 22 mm from one of the available materials: m.s. zinc plated, AISI 304 or AISI 316.

Please order using the following part nos.:

for cam without catch m.s. zinc plated = 1000-15-Z

for cam without catch of AISI 304 = 1000-179-Z

for cam without catch of AISI 316 = 1000-179-ZPD

Notes:

180° hinge for table tops

PROGRAM 1056

180° hinge AISI 316

1056-SU136-PH

Hinge for countersunk screw M5
according to
DIN ISO 2009, 2010,
7046-1, 7046-2 und 7047

Chapter 3: Gasketing

Tolerance of gaskets:

Gasket tolerance on the basis of DIN ISO 3302-1. Soft rubber usually according to "E2" and sponge rubber according to "E3".

PVC edge protection profile tolerance on the basis of DIN 16941-3B.

Some examples:

Nominal dimension		Tolerance class DIN ISO 3302-1 E2	Tolerance class DIN ISO 3302-1 E3
over	up to		
0	1,5	±0.25	±0.40
1,5	2,5	±0.35	±0.50
2,5	4,0	±0.40	±0.70
4,0	6,3	±0.50	±0.80
6,3	10	±0.70	±1.00
10	16	±0.80	±1.30
16	25	±1.00	±1.60
25	40	±1.30	±2.00
40	63	±1.60	±2.50

Nominal dimension		Tolerance class DIN 16941-3B
over	up to	
0	3	±0.40
3	6	±0.60
6	10	±0.70
10	18	±0.80
18	30	±1.00

The appropriate storage is important (optimal storage temperature +5°C to +20°C).

For the storage of gaskets, attention should be paid to DIN 7716 (guidelines for storage, maintenance and cleaning of rubber products). If possible, wrong storage in respect to long lay days or storing times should be avoided, since the mechanical characteristics may change.

Elastomers - operating temperatures and hardnesses:

Materials	Operating temperatures	Hardness(±5° Shore A)
EPDM	approx. -40°C to 100°C	25° (MG) to 90° (WG)
NBR	approx. -30°C to 100°C	25° (MG) to 90° (WG)
CR	approx. -25°C to 100°C	40° to 90°
PVC	approx. -40°C to 70°C	55° to 75°
Silicone	approx. -60°C to 180°C	10° to 90°

MG=sponge rubber / WG=soft rubber

Recommended compression for extruded sealing profile:

The compression of our sealing profiles should be 50% max., since otherwise the function (tightness) and the restoring forces are affected. In practice, the profiles are compressed between 30-50%.

It does not matter, whether it is a EPDM, NBR or a silicone profile. Here, the mechanical properties are (unlike the chemical resistances) quite comparable. If the gasket is deformed beyond these limitations, there is the risk of the compression set (DVR) becoming too big, because the material deforms plastically as well.

Then the gasket would be designed too small.

Resistances:

Because of the large variety of possible chemicals, solvent (concentrations), operating temperatures and times, no evaluations concerning the possible resistances can be made at this point. In every individual case, a test in the present circumstances, like concentration, temperature and duration of the impact, is recommended.

Fire protection:

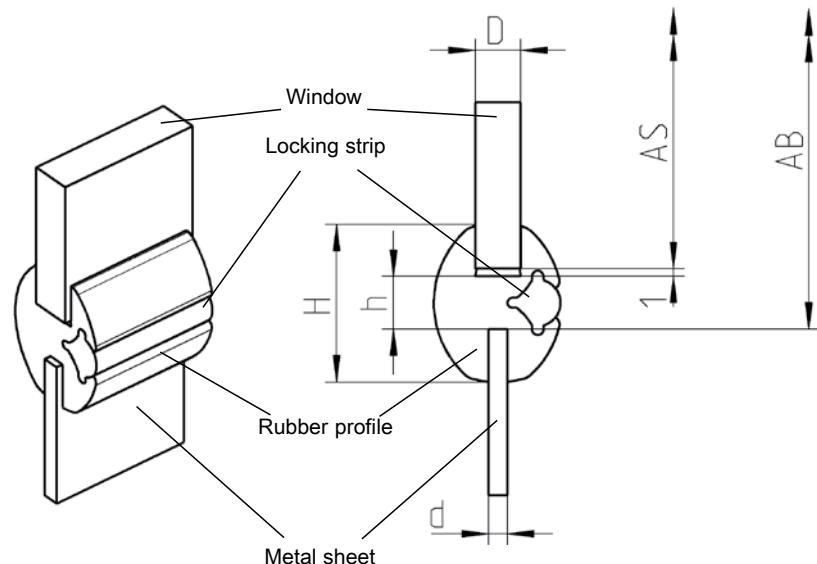

We supply materials certified according to the current fire protection standards for rail vehicles. E. g. according to DIN 5510-2; NF F 16-101/-102; DIN EN 45545-2; UNI CEI 11170; ASTM-C and -E. Whether the achieved categories fit to the respective requirements or vehicle classes has to be verified for the individual case. Generally speaking, silicone profile achieve higher fire protection classes than EPDM.

Disclaimer:

As a rule, disclosed values are standard values detected on sample plates and correspond to our state of knowledge. However, they do not release the end user of individual and thorough tests.

History:

- The work on EN 45545 was finished in January 2012 for the time being.
- DIN EN 45545 was published in June 2013 (available from August 2013).
- The DOW (date of withdrawal) has been Extended from 6 to 36 months so that national standards, e. g. DIN 5510, are to be withdrawn by March 2016.

DIN EN 45545-2:

This part stipulates the test procedures for test conditions and requirements for the reaction to fire of each Hazard Level.

Hazard Level:

Operation category	N: Standard vehicles	Building class		
		A: Vehicles for automatic train operation not having staff on board that is trained for emergencies.	D: Double-decker trains	S: Sleepers and couchettes (bilevel or unilevel)
1	HL1	HL1	HL1	HL2
2	HL2	HL2	HL2	HL2
3	HL2	HL2	HL2	HL3
4	HL3	HL3	HL3	HL3

Operation categories:

Operation category 1: surface vehicles

Operation category 2: tunnel max. 5 km

Operation category 2: tunnel > 5 km

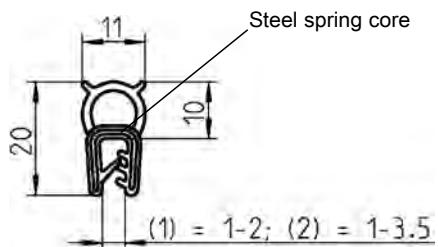

Operation category 4: tunnel, evacuation from the side not possible

Gasketing:

The gasketing has been included in DIN EN 45545 and have to meet the requirements R22 for indoors or R23 for outdoors as a function of the Hazard Level. In order to be able to define the Hazard Level, you need to know the Operation Category and Building Class, e. g. 2 (tunnel max. 5 km) D (double-decker trains)!

Examples of customer solutions

EPDM-Fire protection gasket

anti-static

Attention:

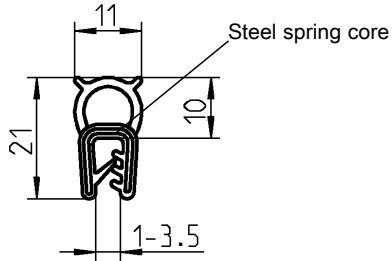

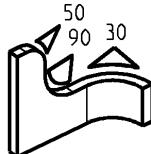

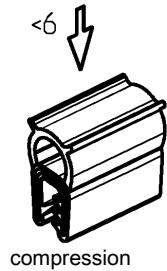

Please provide a contact area for all anti-static gaskets. For painted or powder coated cabinets see conductive tape.

Sealing profile silicon solid material and steel spring core; flame proof according to DIN 5510-2

1011-S80

EMC

Attention:

Please provide a contact area for all EMC gasketings. For painted or powder coated cabinets see conductive tape.

Soft-sponge rubber / EPDM with conductive overall coating and steel spring core

1011-05-E

EMC conductive tape

- for painting and contact
- highly-conductive adhesive for creating paint-free contact areas
- length 25 metres

Note:

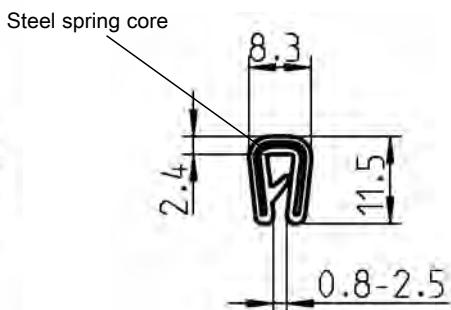

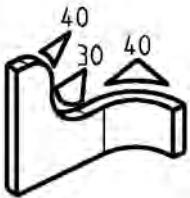

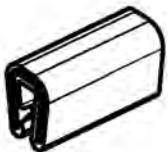

- The area to be adhered to has to be free of grease and dust.
- Remove the protective foil from the conductive tape and adhere it to the contact area. For better adhesion the conductive tape is wider than the mask.
- Afterwards painting or coating is possible, the mask prevents the coating adhering to the conductive tape. Please note the following instructions for heat treatment of the conductive tape: max. 120°C permanent heat; short term up to 230°C possible; each time individual testing is necessary.
- After painting or powder coating the mask can be removed easily, the conductive tape is left securely in place.

Content

4.1 Electronic locking system	174
4.2 Electromechanical locking system	175

Single point latch with integrated status contact

The single-point-locking is applicable in special application areas. The single-point-locking is designed for the connection with the control modules 3000-U32-0x and 3000-U33-0x.

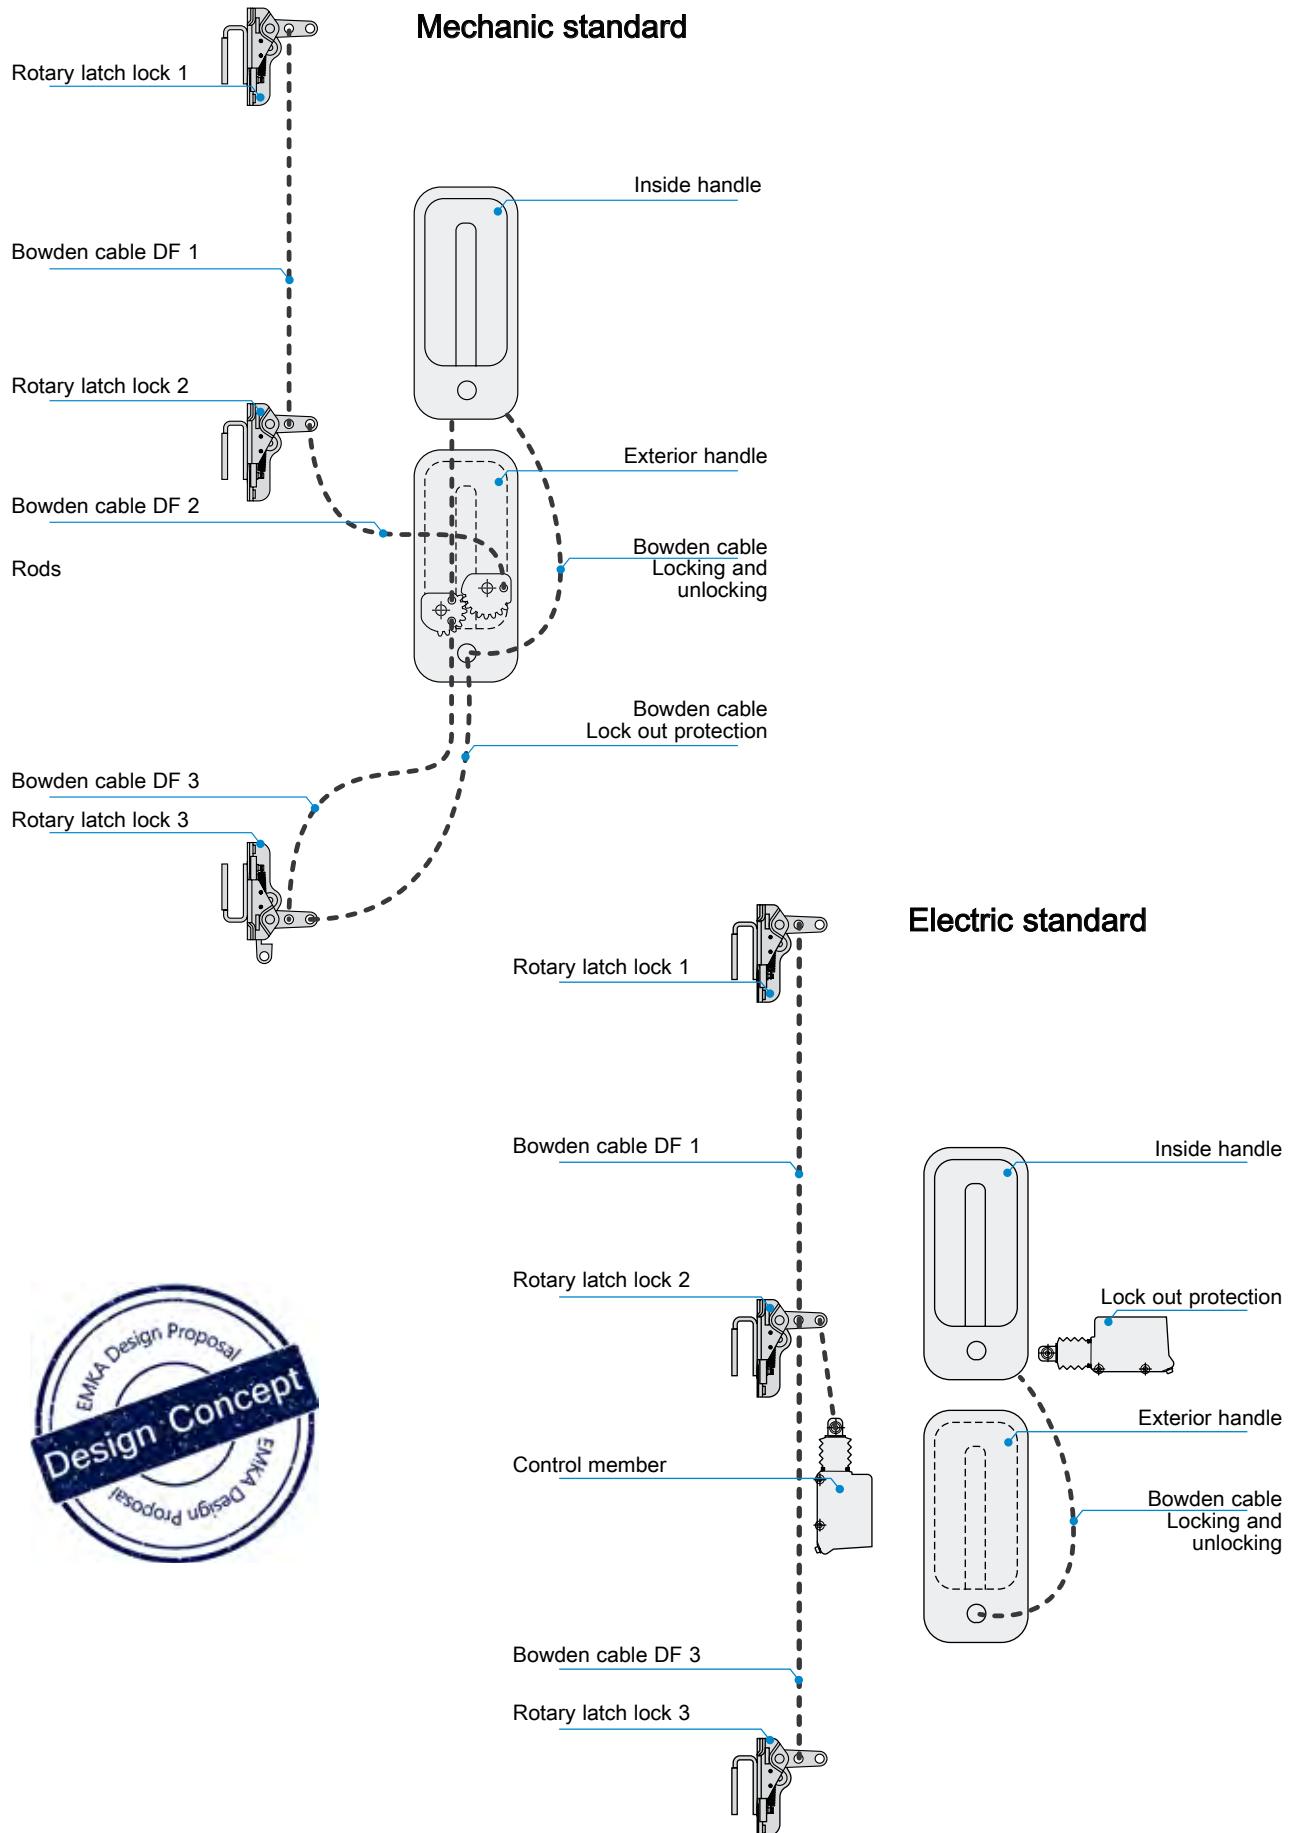

Single-point-locking with integrated status contact,
housing polyamide 66+PA6i GF 40 V0 black;
rotary latch and ratchet m.s. bonded coating;
bolt catch AISI 316; gear motor; electronics; cable with RJ connector 150 mm;
fastening angle m.s. zinc plated; screw m.s. zinc plated; with springs;
with assembly instruction and user manual

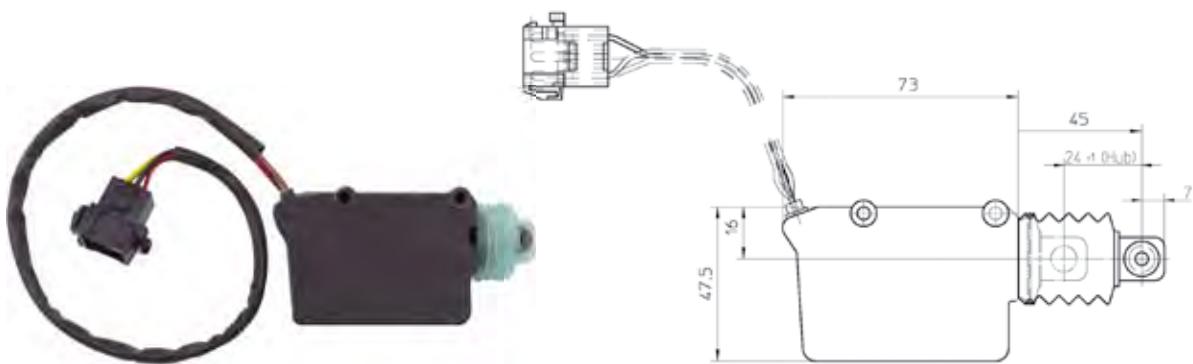

Basic	3000-U300-01
Basic delayed Re-Lock; (with delayed re-lock)	3000-U300-02
Energy-store; automatic unlock in case of power failure	3000-U300-03
Adapter cable for RJ-box to	
open cable end for modular construction form KIT	3000-U15
Plug for modules of type Box and 19" rack mount unit	3000-U15-01

On request:

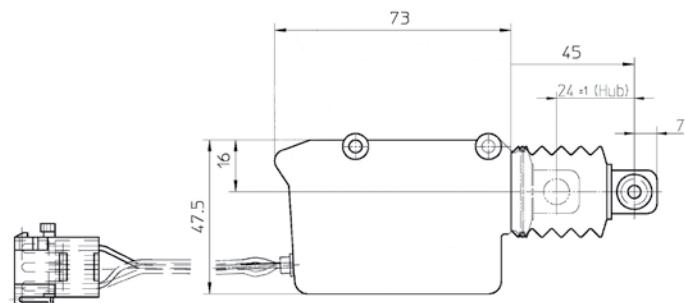

- Fitting panel for Bowden cable
- Bowden cable

Electromechanical locking system on basis of rotary latch lock

Version 5225-U1 and U3; max. 1 second to energize

Several versions available:
Tension and pressure motor with spring return

- Motor for central locking
- Tension and pressure motor
- with or without microswitch
- multiple connectors
- Cable lengths and versions on request

Actuator electric locking and unlocking e.g. for central locking

12V with microswitch, cable length 400 mm with 6-pin. AMP connector

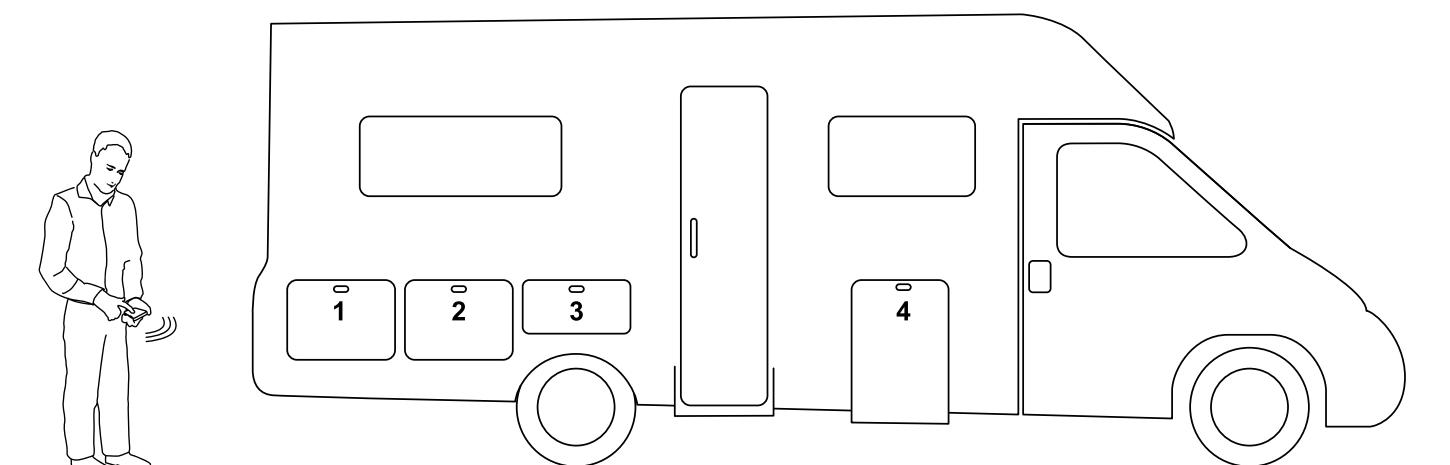

5225-U1

24V with microswitch, cable length 400 mm with 6-pin. AMP connector

5225-U3
